

# Horner App

## Your Complete PLC Solution

The Horner App is the first automation app to give customers the ability to access all WebOCS enabled controllers with their iOS phone or tablet. (Android devices will be coming soon.)

You will be able to organize WebMI access and visualization, and FTP files in and out of your Horner devices, using file integration of your phone or tablet.

### WebMI

With Horner WebMI, you can monitor and control plant data from the palm of your hand by accessing Web Pages that are published directly from the OCS Controller. WebMI allows OCS Application Screens and Data to be created as Webpages that can be interacted with or you can create different pages using the same data. With the Horner App, these Web pages can be monitored and controlled from your tablet or other mobile device.

### CSCAPE CONFIGURABILITY

You don't have to be a professional web developer to benefit from the remote-accessing capabilities of WebMI. With WebMI, we've made accessing your Horner OCS controller as smooth and simple as possible, by putting the WebMI configuration right within our standard programming software (Cscape). Now Cscape allows you to create, monitor and control your OCS web application remotely without any manual HTML development.

### LEVEL-BASED, OBJECT SECURITY

Within Cscape you can assign a level of access to specific users and configure their associated passwords. Not only can you manage who accesses certain WebMI screens, you can govern who has the ability to control the screens which they are allowed to access.

### HTML5

Quickly and instantly delivering almost everything you want to accomplish with your application online to your web browser, HTML5 allows communications across all of your devices. Browser independence assures that your Horner OCS screen looks the same on your phone or tablet as it does on the actual unit, giving you confidence that the control is in your hands.

- \* Level-Based Security not available for all controllers
- \* Requires iOS 13 and above.
- \* Android version will be available soon.

### LICENSING CAPABILITIES

Whether you're looking to utilize one connected device or 50, our licenses come in manageable packages that will work within the scope of most applications and organizations. Unable to access the internet while licensing a specific unit? Our WebMI licensing technology allows for off-line licensing. And it is quick, easy and secure. While individual licenses reside in the host OCS, multiple users can gain access through registered IP address via their tablet or smartphone.
